
Scope of Work & Cost

MANUFACTURING MODULE DESIGN SETUP SECTION

1. Batch Manufacturing BOM

Fields:

- ✓ Approval Document No (Memo)
- ✓ Category
- ✓ Description (e.g. BoM for Best Choice Emulsion Paint 3040 Drum)
- ✓ Finish Product Code Link
- ✓ Output Store (for Intermediate finished goods, mainly with the factory Name)
- ✓ Actual Output
- ✓ Accepted Excess or Shortage
- ✓ Main Raw Material (Output determinant)

Materials Tab (Multiline)

- ✓ Raw Product Code
- ✓ Product Quantity
- ✓ Source Store for Raw Material

After selection it should show the unit cost and total cost for each line and at the end show total material cost

Other Cost Tab (Multiline)

- ✓ Labor Cost
- ✓ Power Cost
- ✓ Other Costs

It should show total other cost. Afterward, the system the system should show total cost for each finish goods

2. Single Product BOM

Fields:

- ✓ Approval Document No (Memo)
- ✓ Description
- ✓ Finish Product Code Link
- ✓ Output Store (mainly with the factory Name)

Materials Tab (Multiline)

- ✓ Raw Product Code
- ✓ Product Quantity
- ✓ Source Store for Raw Material

After selection it should show the unit cost and total cost for each line and at the end show total material cost

Other Cost Tab

- ✓ Labor Cost
- ✓ Power Cost
- ✓ Other Costs

It should show total other cost. Afterward, the system the system should show total cost for each finish goods

3. Pot/Machine Details Capturing

- ✓ Id (system generated)

- ✓ Description
- ✓ Capacity
- ✓ Status

4. Manufacturing Staff Setup

Defines individual staff involved in manufacturing.

Fields:

- ✓ Employment ID
- ✓ Name
- ✓ Phone Number
- ✓ Address
- ✓ BVN
- ✓ NIN

5. Production Team Setup

Organizes manufacturing staff into production teams.

Fields:

- ✓ Team Name
- ✓ Supervisors (Multiline and mainly ABTC Staffs)
- ✓ Production Team Members (multiline staff list)

PROCESSING SECTION

1. Production Order
 - ✓ BOM Selection
 - ✓ Quantity to produce
 - ✓ Start date
 - ✓ End date

Above can be repeated

System action

- ✓ To populate a table below with the qty of finish goods to produce
- ✓ To populate a table below with the required raw materials for the above items to produce

Logic

The system will create the order first as pending

There should have approve button to approve the order, after approval it shouldn't be edited

Before it is linked with any document, it can be closed after been approved, which render it not usable.

The document shouldn't have any effect on inventory or ledger balances

2. Daily Manufacturing schedule form

- ✓ Date selection
- ✓ Production order selection

After selecting the order, the order should be made available for user to select its lines based on the unproduced items on the order

Logic

The document can only be created by linking with existing open orders

The document should only allow creation when there is enough inventory process the scheduled products

The document should first come as pending which means it can be edited after creation

The document should have approve button to approve the schedule, after which the document can't be edited

After been approved, the order linked with should be updated by reducing the processed qty of the order

The document should made reservation of inventory, meaning you can't make schedules more than the available inventory

3. Materials Requisition form

- ✓ Date selection
- ✓ Daily schedule selection or
- ✓ BOM Selection

If one of the two above is selected, the system should automatically disable the other one

The system should populate the materials required for the selected schedule

Logic

The document can only be created by linking with existing schedules orders

The document should first come as pending which means it can be edited after creation

The document should have approve button to approve the schedule, after which the document can't be edited

After approval, the status of the document should change and await issuing, if issued, a button for issued should be clicked on

When this form is used with BOM instead of schedule, the requisition should make reservation of inventory

After issuing, there should be a button for received, after which the receiving party can click, this made the document available for next form usage

4. Single Product manufacturing

Fields:

- ✓ Date
- ✓ Requisition selection

The system should only show requisitions with single BOM on it

The selected schedule can be partially for fully used

- ✓ Batch Number (auto generated)
- ✓ Manufacturing Team
- ✓ Pot/Machine selection
- ✓ Quantity to manufacture

Logic

This document performs the actual manufacturing

When created it will first come as pending

Afterward it will be posted

After posting, it will deduct the calculated raw materials qty and also credit the corresponding cost to the raw material category asset account

Then it will add the finish goods qty to the finish goods created and credit the finish goods category asset account

Then it will recalculate the average cost of the finish goods inventory

5. Batch Production Creation form

- ✓ Date
- ✓ Daily requisition selection

The system should populate only the requisitions with Batch BOM on it

The selected schedule can be partially for fully used

- ✓ Manufacturing Team
- ✓ Pot/Machine selection
- ✓ Quantity (It should always come with default as 1)

Logic

This document performs the actual manufacturing

When created it will first come as pending

Afterward it will be posted

After posting, it will deduct the calculated raw materials qty and also credit the work inprogress account

6. Batch Conversion (Batch Manufacturing)

- ✓ Date
- ✓ Batch Selection
- ✓ Produce qty

Logic

This document performs the conversion of the above batch to finish goods

When created it will first come as pending

Afterward it will be posted

After posting, it will deduct the calculated amount from wok in progress and also credit the corresponding cost to the Finish goods category asset account

Then it will add the finish goods qty to the finish goods created and credit the finish goods category asset account

Then it will recalculate the average cost of the finish goods inventory

7. Manufacturing Additional Cost

Fields

- ✓ Date
- ✓ Production selection
- ✓ Account selection
- ✓ Amount
- ✓ References

Logic

This will be used to add additional cost to the produced finish goods

It will have status as pending and posted

After posting, it will share the amount to the number of finish goods on the selected production

Then recalculate average cost

8. Penalty Management

Captures penalties or deductions applied to manufacturing teams.

Fields:

- ✓ Date
- ✓ Team Name or Staff ATC
- ✓ Description
- ✓ Amount charged
- ✓ Production Document No
- ✓ Add the total lost incurred

Logic

This will have status as pending and posted

The amount posted to a team will be added to the team ledger balance

9. Manufacturing Return Form

This form will be used to reverse a manufacturing that have already been processed erroneously

Fields

- ✓ Date
- ✓ Reference number
- ✓ Production selection
- ✓ Reason

Logic

Link return only to available production number which is currently not completely return, meaning we can have partial return

Credit back all raw materials used for the qty returned

Debit the corresponding finish goods

Recalculate average cost

10. Manufacturing Rework Form

This from will be used to add more raw materials and cost to and already existed manufacturing work

Fields

- ✓ Date
- ✓ Reference Number
- ✓ Production selection

Materials Multi Line

- ✓ Product Code
- ✓ Qty

Other cost

- ✓ Power
- ✓ Labour
- ✓ Other cost

Logic

Must have link to an existed production number

Debit the raw materials used

Add total raw materials and other cost to the existing cost of the finish goods

Recalculate average cost

REPORTING SECTION

Provides insights into manufacturing operations, team performance, and cost control.

1. Manufacturing History Report

Filters:

- ✓ Date Range
- ✓ Factory
- ✓ Category
- ✓ Batch Number

Fields:

- ✓ S/N
- ✓ Product Code
- ✓ Product Description
- ✓ Quantity
- ✓ Unit Cost
- ✓ Total Cost
- ✓ Batch Number

2. Manufacturing Teams Report

Filters:

- ✓ Date Range
- ✓ Factory
- ✓ Team
- ✓ Category
- ✓ Batch Number

Fields:

- ✓ S/N
 - ✓ Product Code
 - ✓ Product Description
 - ✓ Quantity
 - ✓ Cost
 - ✓ Total Cost
 - ✓ Batch Number
 - ✓ Unit Amount
 - ✓ Total Amount
-
